

Classics: B-7's, Elite and Wicked Tall Feeders

Cleaning: Please for the sake of the birds, keep your feeders clean! Dirty feeders can harm the birds. Use a mild soap and water solution and a soft bristle brush for thorough and simple cleaning. Dry completely before filling with seed.

Disassemble

1. Remove the top cap by cutting off or straightening with pliers, the ends of the bail wire. Pull bail rod out from the side of tube.
2. With feeder in a horizontal position, push downward against each perch rod on a flat surface until it is pushed through to the opposite side and remove. Disassemble each pair of ports which are held together with a nut and a Phillips screw.
3. Unscrew the 2 Phillips screws underneath the base and remove. Push baffle upward a few inches and squeeze the tube, slightly oblong in shape, horizontal with hanger bar, and reach inside the tube and remove hanger bar, and then the baffle.

Note: Phillips screws on base and ports are all the same size.

Assemble

1. Place baffle inside tube, with the open end facing down, and slide baffle upward, aligning the square slots to go over the hanger bar holes, and the round slots to go over the perch rod holes. Install hanger bar by squeezing the tube, slightly oblong in shape, placing hanger bar into the designated holes in tube. Move baffle into place on hanger bar using the lower port holes in tube.
- Note: Slide baffle further up tube if hanger bar is difficult to insert.**
2. Port Assembly: First, place Phillips screws in their holes on half of the ports. While tube is in a horizontal position, hold nut in place on port with finger while placing port onto tube. Take a port with Phillips screw and place opposite of the port with nut and tighten Phillips screw. Make certain that the hole in bottom of port is aligned with the perch rod hole in tube. Do not completely tighten Phillips screws until perch rods are inserted into feeder.
 3. Place base on feeder and install both Phillips screws through base into the hanger bar.
 4. Perch Rod Installation: **Note: For easier insertion, place perch rods in freezer for 20-30 minutes.**
 - a. Hold a perch rod in an upright position on a carpeted area or workbench. With the feeder in a horizontal position, line up the perch rod with the perch rod hole in the feeder. Push the feeder down onto the perch rod, allowing the rod to push up through the tube.
 - b. Align the partially inserted rod with the exit hole and push until the rod extends equally on both sides of the tube. Finish tightening Phillips screws on ports.
 5. Insert bail rod in holes at top of tube. Place top cap on feeder and insert bail wire through the holes in the cap and bail rod. Use pliers to bend the ends of the bail wire to 90° angles.
