

HOW TO ATTACH YOUR CAGE

Your new cage is designed for use with a tubular bird feeder with a diameter of 2 ½" or 3 ½". If the cover fit is too tight, enlarge the opening using a file.

Attaching cage to a feeder with a removable cap, such as Droll Yankees New Generation® 15" feeder and A-6F (re-introduced 2015) feeder

1. Remove the top cap by sliding the cap up the bail wire and pulling each end of the bail wire out of the bail rod.
2. Squeeze the tube, slightly oblong in shape, horizontal with bail rod, and reach inside tube and remove the bail rod.
3. Slide the clear cover onto the tube.
4. Squeeze the end of the spring clamp which enlarges the diameter to fit over the tube and slide it down beneath the holes for the bail rod.
5. Install the bail rod by squeezing the tube, slightly oblong in shape, horizontal with both holes which accepts the bail rod and insert bail rod into the holes of tube.
6. Replace top cap by inserting each end of the bail wire into the bail rod and slide top cap down into place on the tube.
7. Slide the feeder into the cage and attach by installing the black threaded wing nut through the bottom of the cage and into the threaded hole in base of feeder.
8. Adjust the position of the spring clamp so that it's holding the cover snugly against the top of the cage.

Attaching cage to a feeder with a fixed cap, such as the Droll Yankees A-6F (original) feeder and B-7F feeder

1. Remove the top cap by cutting or straightening the bent ends of the bail wire and pulling the wire up through the bail rod and the top cap.
2. Remove the bail rod.
3. Slide the clear cover down onto the tube.
4. Squeeze the end of the spring clamp which enlarges the diameter to fit over the tube and slide it down beneath the holes for the bail rod.
5. Insert the bail rod in the designated holes at the top of the tube.
6. Replace the top cap and slide the bail wire through the holes in the top cap and then through the holes in the bail rod.
7. Using pliers, bend the ends of the bail wire to 90° angles.
8. Slide the feeder into the cage and attach by installing the black threaded wing nut through the bottom of the cage and into the threaded hole in base of feeder.
9. Adjust the position of the spring clamp so that it's holding the cover snugly against the top of the cage.
