

Little Flyer Hummingbird Feeder (LF-4)

Droll Yankees feeders can be disassembled for easy cleaning and part replacement.

Cleaning: *Please for the sake of the birds, keep your feeders clean!* Dirty feeders can harm the birds. Use a mild soap & water solution and a soft brush for thorough, simple cleaning. Hummingbird feeders should be **cleaned every five days**, more often in warm weather, as nectar spoils easily in the heat.

Disassemble

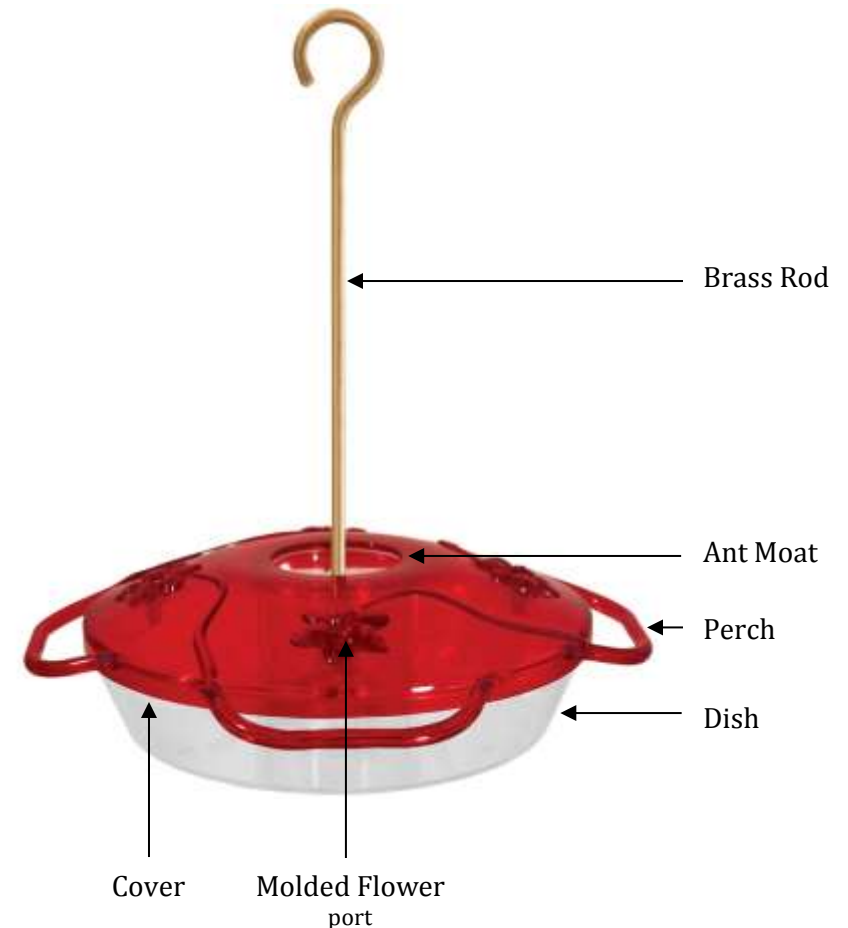

1. Remove the brass rod by grasping the brass rod by the open hook and turning it counter-clockwise.
2. Remove the cover by holding the dish in one hand and using your other hand to pry the cover off between each perch, working your way around the feeder.

Note: *Do not remove the cover by using the perches.*

Assemble

1. Fill the dish with nectar.
2. Place the cover on top of the dish. Apply pressure to the center of the cover over the ant moat using the heel of both hands and press down firmly. This will allow a secure tight fit and the cover will seal evenly around the dish.
3. Align the threads in the brass rod to the threaded hole in the center of the dish. Turn the brass rod by the open hook clockwise until the brass rod is securely tightened into the dish.
4. Fill the ant moat, located in the center of the dish, to the top with water.

Nectar Guard Tips (NGT) may be purchased separately and are used to prevent flying insects, if they are a problem, from accessing the nectar. **Please allow the hummers to get familiar with the feeder for a week before installing the nectar guard tips as the nectar guard tips will cause some resistance.**
