

Nectar Guard® Tips – Model NGT

- Patented tips protect nectar from bees and flying insects
- Allow hummingbirds to feed easily
- Are washable and removable
- Reduce rain dilution

Installation and Cleaning: Allow the hummingbirds a few days to get used to the feeder before in-stalling the Nectar Guard® Tips. Push the tips onto flower port stems that extend into the feeder dish. Avoid exposing the Tips to high temperatures. Clean the Tips each time you clean the feeder (every 3-4 days), using warm soapy water and sanitizing with a 50/50 solution of white vinegar and warm water. Rinse thoroughly. Replace Tips at least once per year, or more often if necessary.
